TINA on-Premise

OUTSCALE

Key Points

- **Dedicated Cloud** Platform.

- Overflow to **Public Cloud services.**

- **Choice** of location.

- Cloud resources **Scalability.**

- **24/7** support and maintenance service.

- **Gouvernance management.**

- Catalogue of **ISO 27001, 27017 and 27018** certified services.

- **API compatible** with market standards.

- Data **availability, flexibility** and **security.**

TINA ON-PREMISE - TURNKEY CLOUD APPLIANCE

OUTSCALE has developed 'TINA on-Premise' to meet your cloud strategy with unified management. Your services will be deployed where you wish according to your policy and the criticality of the service and data.

TINA on-Premise is the first turnkey appliance of Cloud technology.

ORCHESTRATION OF CLOUD RESOURCES

TINA OS is the OUTSCALE Cloud 'orchestrator' tool that allows you to control your Cloud infrastructure freely, via its API or any tool compatible with market standards. TINA OS provides any type of Cloud resources you need: virtual machines, network, storage and security.

TINA OS

You can also benefit from existing machine images or create new ones according to your needs, configure your virtual networks and their routing, and benefit from a high scalability of storage volumes.

DATA GOVERNANCE

TINA OS gives you the ability to manage physical logistical zones to enable you to manage your data.

One of the main advantages of our 'orchestrator' is that it allows you to instantly create snapshots of your environments and therefore to benefit from better management of your backups. Through TINA OS, you also have a fully secure object storage platform.

Creating a standard environment model ('Image Cloud') simplifies the management of the life cycles of your Cloud resources.

COMMITMENTS & SECURITY

The security of our Cloud is our priority. At OUTSCALE, we put in place the best systems to guarantee the highest levels of security in accordance with the most demanding standards on the market, across all our services.

With TINA OS, you can configure your secure and encrypted connections, as well as all identity and resource access on the OUTSCALE Cloud in complete security. In hybridization, you have the possibility to interconnect your Datacenters with those of OUTSCALE thanks to a dedicated physical link. All logs are centralized and made available to you.

CAPACITY OPERATION AND MANAGEMENT

The dozen or so annual updates allow for improved performance, additional features and bug fixing. We also manage the lifecycle of reference Cloud images with continuous updates.
You have the possibility to add to your monitoring system, the indicators provided by our operating tools.

Our support and training in solution management will allow you to ensure a better utilization of your platform and guarantee you a solid capacity management at the same time.

OUTSCALE

About OUTSCALE

- Founded in 2010.

- Strategic Partner to **Dassault Systèmes.**

- **Worldwide Cloud Infrastructure:** America, Europe et Asia.

- **Innovation:** 15% of revenue invested in innovation.

- **R&D:** 30% of staff dedicated to Research and Development.

- **Certifications:** ISO 27001, ISO 27017, ISO 27018, CMSP Advanced by Cisco System, Intel Cloud Technology AltaVault par NetApp.

- **GDPR:** Compliant with General Data Protection Regulation.

- **Key Partners:** Cisco, NetApp, Intel, Nvidia and MapR.

24/7 PREMIUM SERVICE & SUPPORT

Because at OUTSCALE, the proximity and satisfaction of our customers are at the heart of our concerns, we support you throughout the implementation of your projects. We help you to set up the Cloud architectures best suited to your needs and train you to use our solutions: follow-up, advice, feedback...

OUTSCALE provides level 1, 2 and 3 support on its solutions 24/7, in French and English.

BUSINESS BENEFITS

Infrastructure is no longer an obstacle to the deployment of new solutions. By using 'TINA on-Premise' hybridization and OUTSCALE Public Cloud, you benefit from significant agility and a better return on investment (ROI).

TINA ON-PREMISE INTEGRATION

You can acquire a TINA on-Premise through an OUTSCALE certified Managed Services Provider (MSP) or via the partner of your choice. The MSP will accompany you during the installation and operation of the equipment. Also, the partner will assist you in the deployment of your Cloud strategy by creating new on-demand services for your users.

FAQ

Can I separate the purchase of the TINA OS orchestrator from the appliance?

We offer a turnkey Cloud appliance with a specific and certified set of hardware, software and services. It would also be possible to use TINA OS on an existing infrastructure subject to validation of this infrastructure by OUTSCALE in order to verify its compatibility and to guarantee the best levels of performance.

What happens if I do not wish to renew the «Services» section?

The end of the Service Contract means the end of support and updates provided. However, the service will continue to operate with the last updated system status.

Do you have any financing solutions for your product?

We have several financing solutions: leasing or on demand.

I use the public Cloud; will I find all the features in my on-Premise Cloud?

Yes, the TINA OS version provides you with the same features available on the public Cloud on your on-Premise Cloud.

Can I buy the desired configuration of TINA on-Premise (computing power, storage capacity, etc.)?

Yes, our Cloud On-Premise is scalable according to your needs, we will help you define the configuration and architecture that best meets your challenges and needs.

Is there a limit to the number of virtual machines available?

The only limitation is the physical configuration and target performance. TINA OS allows infinite scalability of resources.
